PROFESSIONAL SUMMARY

Data professional with 3+ years turning ERP and legacy data into pipelines, data models and Power BI dashboards in manufacturing and automotive (Toyota, Bosch, AC Metais). Supported an Azure data platform (ADLS Gen2, PySpark in Microsoft Fabric, dbt) and delivered its Power BI reporting layer, then rebuilt the full pipeline end-to-end with synthetic data. Automated SAP purchasing tasks with Python and VBA, cutting processing from 3-6 hours to under 5 minutes, consolidated 163 supplier files into a cost reduction dashboard, and cut material lookup time by 60% and scrap by 15% with Power BI. Works daily in English with teams in Japan, Thailand and the United States. EU citizen, available in Lisbon from February 2027.

TECHNICAL SKILLS

BI & Analytics: Power BI, DAX, Power Query, Data Modeling (Star Schema), Power BI Projects (PBIP/TMDL), Microsoft Excel, Data Visualization

Languages: SQL, Python (PySpark, pandas), VBA, C++

Data Engineering: ETL/ELT, Data Pipelines, Incremental Ingestion, Lakehouse Architecture (Medallion), Data Quality Testing (dbt, pytest), Infrastructure as Code (Terraform), Data Governance, ERP Data Migration

Cloud & Big Data: Microsoft Fabric, Microsoft Azure, Azure Data Lake Storage Gen2, Delta Lake, dbt

Databases: PostgreSQL (PL/pgSQL), Microsoft SQL Server, MySQL, SQLite

Tools: Git, GitHub, GitHub Actions (CI), Docker, Terraform, VS Code

Business Systems: SAP ERP, Kiron ERP, Salesforce, OutSystems

PROFESSIONAL EXPERIENCE

Data & BI Analyst Intern (Purchasing) | Feb 2025 - Present
Toyota do Brasil | Sorocaba, Brazil | Hybrid

- Automated PR/PO creation in SAP ERP with Python and VBA, reducing purchasing processing time from 3-6 hours to under 5 minutes (over 95% faster); selected as a top 3 Toyota Business Practices project, with the final presentation to the board and presidency in December 2026.
- Consolidated 163 supplier files into a cost reduction dashboard, replacing days of monthly manual work with a single refresh.
- Replaced a 30-spreadsheet reporting routine with one Power BI view.
- Delivered weekly executive Power BI dashboards tracking Engineering Change (ECI) design modifications, fed by Python and SQL extractions from the legacy SIQ system.
- Standardized databases and data workflows for the TOIOS-to-SAP ERP migration across the TLAC region (Brazil and Argentina).
- Aligned global purchasing data and procedures with teams in Japan and Thailand, working fully in English.

AC Metais do Brasil | Sorocaba, Brazil

Data Engineer (Contract, Remote, Part-time) | Jun 2025 - Oct 2026

- Connected the gold layer to Power BI and built the reporting on top of it, delivering production, lead time and margin analysis to management.
- Supported the integration of ERP and production data into the company's Azure lakehouse, including incremental ingestion from the ERP into Azure Data Lake Storage Gen2 (bronze layer).
- Worked with PySpark notebooks in Microsoft Fabric to clean and standardize data (bronze → silver) and with dbt star schema models and tests (silver → gold).

BI Analyst (Contract, Remote, Part-time) | Nov 2023 - May 2025

- Supported production and management with ongoing analyses and Power BI dashboards integrated with the Kiron ERP.
- Built a Power BI invoice analytics report covering incoming and outgoing invoices (NF-e): supplier spend, sales by customer and service, ICMS/IPI tax balance and projected cash flow from payables and receivables.

BI Assistant | Oct 2022 - Oct 2023

- Built Power BI dashboards integrated with the Kiron ERP, reducing sheet metal lookup time by 60% and scrap by 15%.
- Structured raw material data ingestion with the Production Planning and Control (PPC) team to track daily output, yield rates and inventory movements.

Project Management Intern | Oct 2023 - Jan 2025
Bosch do Brasil | Sorocaba, Brazil

- Managed quotation-to-SOP project lifecycles for Mercedes-Benz product lines (Accelo and LO Farm), tracking milestones in SAP ERP with cross-functional teams.
- Built Power BI dashboards for real-time prototype stock visibility, automating data ingestion with Python email-parsing scripts.
- Contributed to a QR-code based prototype inventory solution that cut inventory losses and part movement rework by about 60%.
- Coordinated requirements and deliverables in English with international partners, including US teams on autonomous technology initiatives.

SELECTED DATA PROJECTS

Industrial Data Platform | github.com/lucasnunesf/industrial-data-platform
Microsoft Azure · Microsoft Fabric · PySpark · Delta Lake · dbt · Terraform · PostgreSQL · Docker · Power BI
End-to-end rebuild, with synthetic data, of the data platform I worked on at AC Metais. A Python plant simulator feeds a PostgreSQL ERP; changed rows are ingested incrementally into Azure Data Lake Storage Gen2, processed with PySpark in Microsoft Fabric (bronze and silver), modeled into a star schema with dbt and 101 automated data checks (gold), and served to Power BI for bottleneck, lead time and on-time delivery analysis. Infrastructure in Terraform. MVP completed; next: streaming, Airflow and CI/CD.

Payment Flow Automation - Toyota Business Practices (TBP) | github.com/lucasnunesf/sap-automation
Python · VBA · SAP GUI Scripting · pytest
Turns supplier quote spreadsheets into purchase requisitions and orders in SAP with no retyping, standardizing the Purchasing payment flow for tooling, services and investments. Measured in production: up to 97% less time per order (5 h 10 min to 8 min 38 s on a 400-line order). Top 3 TBP project of 2026, to be presented to the board and president in December 2026. Public rebuild with synthetic data, 5 supplier formats and automated tests.

EDUCATION

Bachelor's Degree in Engineering | 2022 - 2026
FACENS | Sorocaba, Brazil

Technical Degree in Business Intelligence and Administration | 2020 - 2022
ETEC | Tatuí, Brazil

CERTIFICATES & TRAINING

- Microsoft Fabric Analytics Engineer (DP-600) - exam scheduled for December 21, 2026
- IBM Data Engineering - Professional Certificate, IBM via Coursera (2026)
- Microsoft Power BI Data Analyst - Professional Certificate course completed, Microsoft via Coursera (2026): Power Query ETL, star schema data modeling, DAX
- English Certificate, CEFR B2, EF Education First

ENGINEERING PROJECTS & LEADERSHIP

Omegabotz Combat Robotics Team, FACENS | Jan 2023 - Aug 2025

- Led design and assembly of combat robots, programming microcontroller and motor control logic in C++ and analyzing real-time telemetry data; won 2nd place at an international championship in Greece.

SAE Formula/Baja Team, FACENS | Aug 2024 - Aug 2025

- Developed electronic data acquisition routines and analyzed real-time sensor data to optimize vehicle handling and prevent component failure.

Falcons Aerodesign Team, FACENS | Jan 2026 - Present

- Coordinate schedules, deliverables and technical documentation across automation and electrical sub-teams, ensuring telemetry sensor integration.
